DETAILED ACTION

Response to Amendment

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn. This office action is in response to amendment filed on 9/25/2008.

Allowable Subject Matter

2. Claims 21-30 and 35-38 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The present application pertains to a battery charging assembly that is utilized in charging the battery for an electronic device. The invention allows the charger to be positioned at a location remote from the device being charged.

Applicant's independent claim 23 recites a battery charging assembly for charging a battery of a mobile device comprising: a charging unit having in a single integral unit a base wall for seating against a surface, with a receptacle defined in the base wall that faces downwardly when the base wall is positioned on a horizontal surface, a power converter for converting an input voltage to a desired output voltage, an output assembly for charging a battery of a mobile device, and at least one electrical contact for receiving the input voltage positioned in the receptacle; and an adapter for coupling a power cord to the receptacle associated with the charging unit, the adapter being removably configured to seat in the receptacle such that a front face of the

adapter faces the receptacle and is hidden from view when installed therein, a rear face of the adapter forms part of the wall of the charging unit, and has a substantially flat outer surface that allows the adapter rear face to be positioned flush with the base wall of the charging unit and having at least one electrical contact for mating with the at least one electrical contact positioned in the receptacle, said adapter including a latching mechanism for latching the adapter into the receptacle, with the latching mechanism comprising a pair of spring clips configured to engage a post defined in the receptacle, and said adapter being configured to attach to a power cord and plug and said adapter is not capable of storing power for independent use, wherein each of the pair of spring clips includes an inwardly extending protrusion for mating with a corresponding non-cylindrical recess defined on a post positioned in the receptacle.

Applicant's independent claim 25 recites a battery charging assembly for charging a battery of a mobile device comprising: a charging unit having in a single integral unit a base wall for seating against a surface, with a receptacle defined in the base wall that faces downwardly when the base wall is positioned on a horizontal surface, a power converter for converting an input voltage to a desired output voltage, an output assembly for charging a battery of a mobile device, and at least one electrical contact for receiving the input voltage positioned in the receptacle; and an adapter for coupling a power cord to the receptacle associated with the charging unit, the adapter being removably configured to seat in the receptacle such that a front face of the adapter faces the receptacle and is hidden from view when installed therein, a rear face of the adapter forms part of the wall of the charging unit, and has a substantially flat

outer surface that allows the adapter rear face to be positioned flush with the base wall of the charging unit and having at least one electrical contact for mating with the at least one electrical contact positioned in the receptacle, said adapter including a latching mechanism for latching the adapter into the receptacle, said adapter being configured to attach to a power cord and plug and said adapter is not capable of storing power for independent use; and further comprising at least one guide pin positioned inside the receptacle for guiding the adapter into the receptacle.

Applicant's independent claim 26 recites a battery charging assembly for charging a battery of a mobile device comprising: a charging unit having in a single integral unit a base wall for seating against a surface, with a receptacle defined in the base wall that faces downwardly when the base wall is positioned on a horizontal surface, a power converter for converting an input voltage to a desired output voltage, an output assembly for charging a battery of a mobile device, and at least one electrical contact for receiving the input voltage positioned in the receptacle; and an adapter for coupling a power cord to the receptacle associated with the charging unit, the adapter being removably configured to seat in the receptacle such that a front face of the adapter faces the receptacle and is hidden from view when installed therein, a rear face of the adapter forms part of the wall of the charging unit, and has a substantially flat outer surface that allows the adapter rear face to be positioned flush with the base wall of the charging unit and having at least one electrical contact for mating with the at least one electrical contact positioned in the receptacle, said adapter including a latching mechanism for latching the adapter into the receptacle, said adapter being configured to

attach to a power cord and plug and said adapter is not capable of storing power for independent use; and wherein the latching mechanism comprises a pair of guide bars configured to engage a post positioned in the receptacle and a pair of detents positioned on opposite sides of the adapter, said detents configured to engage spring biased ball bearings that are positioned on the receptacle.

These claims comprise a particular combination of elements, which is neither taught nor suggested by the prior art. Accordingly, Applicant's claims are allowed for these reasons and for the reasons recited by Applicant in the amendment filed on 9/25/2008.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
